# Appearance introduction of solar inverter

What is a solar inverter?

Let's talk more about what is a solar inverter. A solar inverter is a precious component of the solar energy system. Its primary purpose is to transform the DC current that the panels generate into a 240-volt AC current that powers most of the devices in your place.

How does a solar inverter work?

The solar inverter's primary job is to take the raw DC electricity from your solar panels and convert it into the stable, usable AC electricity that powers your life. Without an inverter, the energy generated by your solar panels would be completely useless for your home.

Do solar systems come with a solar inverter?

Solar systems come with a solar inverter, PV panels, battery, and a rack to keep all the parts in place. Let's talk more about what is a solar inverter. A solar inverter is a precious component of the solar energy system.
