## Arc flash switchgear in China

How does an arc flash switchgear work?

Generally, this type of switchgear will come with flaps that open under the intense pressure of arcing energy. The flaps allow the heated gases of an arc flash and the pressure to safely vent out of the enclosure and away from the operator. When venting arc flash gases outside of the switchgear room is necessary, extra duct work is used.

What are arc flash risks?

Arc flash risks have the potential to severely damage electrical infrastructure and company operations. The following business losses are caused by arc flash hazards: Additional spending for medical treatment, therapy, and workers' compensation, as well as costs associated with accident investigation and lost productivity.

What is an arc fault & arc blast?

An arc fault is an unintentional electrical discharge that results in a fire. Arc flashes produce high heat, which results in dazzling light and a loud boom. An arc blast is a high-pressure wave that can discharge shards and molten metal. Arc flash risks have the potential to severely damage electrical infrastructure and company operations.
