# Argentina Communication Network Base Station Construction Project

Why is China launching a deep space station in Argentina?

Officially, the Deep Space Station operated by China in Argentina is primarily intended to "support activities such as interplanetary exploration, astronomical observation, and satellite tracking and control in orbit."

However, the facility raises concerns both domestically and regarding security in the United States.

Why is Argentine infrastructure a major constraint?

Infrastructure/Construction As a geographically large country with widely distributed population centers, Argentina has substantial needs to increase and improve infrastructure. A major constraint is a lack of investment in and financing of such large projects. The Argentine government plays a prominent role in the infrastructure sector.

Why is China limiting Argentina's control over the Neuquén Station?

The regulatory environment surrounding the Neuquén station has granted China considerable autonomy, effectively limiting Argentina's oversight capabilities. Operational clauses of the agreements provided China with sweeping rights and privileges, essentially granting it near-sovereign control over the facility.

Who facilitated the construction of China's Space Station?

The two agreements that facilitated the construction of the complex were signed in 2012: one between the China Satellite Launch, Tracking, and Control General (CLTC) and the National Commission on Space Activities (CONAE) of Argentina, and the other between the Chinese entity and the province of Neuquén.

The station integrates with China's Deep Space Network, linking Argentina to global missions exploring the Moon, Mars, and other solar system bodies.

Simultaneously, in the age of big data information, it is possible to obtain real-time feedback of base station traffic data. By acquiring information about traffic changes in mobile ...

The base concerns; the head of U.S. Southern Command The space station is a facility that clearly demonstrates the potential for ...

We also install base station equipment in blind areas (underground restaurant malls, subway stations, road tunnels, etc.) with ...

We give you a list of all the major building and construction projects currently under construction in Argentina covering roads, rail, airports, sea ports, buildings, energy, ...

In order to increase the contribution of the communication industry to mitigate the global greenhouse effect, future efforts must focus on reducing the carbon emissions ...

China's space operations in Argentina face scrutiny over military ties, raising concerns about strategic risks of dual-use capabilities.

We give you a list of all the major building and construction projects currently under construction in Argentina covering roads, rail, ...

---

Additionally, 5G base stations will rely heavily on network slicing and edge computing to provide customized network experiences for different applications, ranging from ...

Search all the announced and upcoming infrastructure development projects, bids, RFPs, ICBs, tenders, government contracts, and awards in Argentina with our comprehensive ...

The 5th generation mobile networks (5G) is in the ascendant. The 5G development needs to deploy millions of 5G base stations, which will become considerable ...

Similarly, Russia has a network of antennas for Glonass, its satellite navigation system, in some Latin American countries, like Brazil, Nicaragua, Venezuela, Argentina, Mexico, and Cuba. In ...
