
Basic requirements for energy storage batteries

Should battery energy storage systems be standardized?

The rapid deployment of battery storage systems in homes, industries, and utilities necessitates standardization. Without a unified framework, systems may fail, pose safety risks, or operate inefficiently. The IEC standard for battery energy storage system provides benchmarks for:

What are battery safety requirements?

These include performance and durability requirements for industrial batteries, electric vehicle (EV) batteries, and light means of transport (LMT) batteries; safety standards for stationary battery energy storage systems (SBESS); and information requirements on SOH and expected lifetime.

What are the future standards for battery energy storage?

Future standards may focus more on: The IEC Technical Committee 120 is actively updating existing documents and drafting new ones to address emerging needs. The IEC standard for battery energy storage system is the foundation for the safe and efficient growth of energy storage worldwide.
