What is the purpose of a battery safety report?

The report is intended to be used as a guidance for any machine manufacturer, insurance company, owner / investor / operator of a battery manufacturing plant. Siemens pursues a holistic approach to fire protection in the production of battery cells.

Why is fire safety important in Li-ion battery cell production plants?

Fire safety is of utmost importance in li-ion battery cell production plants due to the potential risks associated with the highly energetic and flammable materials. Siemens has developed and published a concept to identify the process-steps with the highest risks and how to protect these.

Why is battery manufacturing a fire hazard?

The battery manufacturing process involves handling large quantities reactive materials, making the plants vulnerable to fire incidents. Real-life examples, such as the fire of a battery energy storage in Arizona or California in recent year, serve as a stark reminder of the devastating consequences.
