# How many watts of wind and solar power are there in total

How many kilowatt-hours are generated by wind & solar energy in 2024?

The combined power generation from wind and solar energy amounted to 1.83 trillion kilowatt-hours in 2024, a 27 percent increase from 2023. The figure is roughly equivalent to the electricity consumption of the tertiary industry in 2024, and surpasses the residential electricity consumption, which stood at 1.49 trillion kilowatt-hours.

How big is China's Wind power?

This is roughly four times the global average for capacity under construction (9%). China's wind capacity follows a similar rate of growth as solar, according to Global Energy Monitor's Global Wind Power Tracker, with over 590 GW in prospective phases -- nearly 530 GW of onshore capacity and 63 GW of offshore capacity.

What is China's solar and wind capacity?

China's solar and wind operating capacity has soared to 1.4 TW and now accounts for 44% of the world's operating utility-scale solar and wind capacity, more than the combined total of the European Union, United States, and India.

How much solar power does China have?

China leads global utility-scale solar capacity for projects in announced, pre-construction, and construction phases. According to Global Energy Monitor's Global Solar Power Tracker, China has over 709 GW<sup>1</sup> of prospective solar capacity, representing over one-third of planned solar capacity worldwide in 2025.

Solar installations achieve 5.6 gigawatts capacity growth in early 2023, while wind turbines generate enough electricity to power 9% of American homes. These clean energy ...

In 2023, the U.S. electric power sector produced 4,017 billion kilowatthours (kWh) of electric power. Renewable sources--wind, solar, hydro, biomass, and ...

In 2023, the U.S. electric power sector produced 4,017 billion kilowatthours (kWh) of electric power. Renewable sources--wind, solar, ...

China achieved a new milestone in its energy transition, with wind and solar power together generating a quarter (26%) of the country's electricity in April 2025, the highest ...

China saw monumental solar and wind growth in 2024, according to data released today by its National Energy Administration (NEA).

Weight of solar and wind in electricity production data. Data for solar and wind renewable energies in electricity production available in a map and excel file by country level.

China is advancing a nearly 1.3 terawatt (TW) pipeline of utility-scale solar and wind capacity, leading the global effort in renewable energy buildout. This is in addition to China's ...

China's goal of being carbon-neutral by 2060 requires a green electric power system dominated by renewable energy. However, the potential of wind and solar alone to ...

China saw monumental solar and wind growth in 2024, according to data released today by its National Energy Administration ...

---

Renewable power capacity growth (GW) Renewable power capacity increased by 585 GW (+15.1%) in 2024. Over three-quarters of the capacity expansion was due to solar energy ...

The newly installed capacity of renewable energy in 2024 accounted for 86 percent of China's total newly installed power capacity, while the cumulative installed capacity of ...
