

# How much does a sodium ion battery energy storage cabinet cost

How much does a battery energy storage system cost?

In 2025, the typical cost of commercial lithium battery energy storage systems, including the battery, battery management system (BMS), inverter (PCS), and installation, ranges from \$280 to \$580 per kWh. Larger systems (100 kWh or more) can cost between \$180 to \$300 per kWh. How does battery chemistry affect the cost of energy storage systems?

How much does a commercial lithium battery energy storage system cost?

In 2025, the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region depending on economic levels.

Is sodium-ion battery suitable for solar energy storage?

The sodium-ion battery developed in this work is suitable for solar energy storage because it has advantages of long cycle life, low cost, and materials abundance over lithium-ion batteries. It also has the feasibility for large-scale production using the existing infrastructure of lithium-ion batteries.
