# How much does a wind turbine energy storage cabinet cost

How long does a wind turbine last?

For utility-scale wind farms, the payback period is typically 6-10 years recouping the \$3-4 million per MW installed cost through ongoing energy sales. Small residential turbines can take 10-20 years to break even. How much does it cost to maintain a wind turbine?

How much does it cost to maintain a wind turbine?

Keeping utility-scale wind turbines operating at peak efficiency requires extensive preventative maintenance, inspections, and unplanned service, costing on average \$42,000 to \$48,000 per megawatt in annual operating expenses.

How much does a wind turbine cost?

Dramatic Cost Range: Wind turbine costs span from \$700 for small residential units to over \$20 million for offshore turbines, with total project costs varying from \$10,000 to \$4,000+ per kW installed depending on scale and location.

How much does a distributed wind energy system cost?

The residential and commercial reference distributed wind system LCOE are estimated at \$240/MWh and \$174/MWh, respectively. Single-variable sensitivity analysis for the representative systems is presented in the 2019 Cost of Wind Energy Review (Stehly, Beiter, and Duffy 2020). Analysts included the LCOE estimate for a large distributed wind energy
