
Mobile energy storage cabinet use environment requirements

What are the requirements for a mobile energy storage system?

An approved fence with a locked gate or other approved barrier shall be provided to keep the general public at least 5 feet (1024 mm) from the outer enclosure of the energy storage system. Mobile energy storage system equipment and operations shall comply with Sections 1206.17.1 through 1206.17.7.7. See Section 1206.17.2.

How far should a mobile energy storage system be from the public?

An approved fence with a locked gate or other approved barrier shall be provided to keep the general public at least 5 feet (1024 mm) from the outer enclosure of a deployed mobile energy storage system. Smoking shall be prohibited within 10 feet (3048 mm) of mobile energy storage systems.

Are mobile energy storage systems ambiguous?

There is also ambiguity in available technologies and vendor products that can be reliably used in mobile energy storage applications. In that regard, the design, engineering and specifications of mobile and transportable energy storage systems (ESS) projects will need to be investigated.

What is mobile energy storage system?

The primary application of mobile energy storage systems is for replacement of polluting and noisy emergency diesel generators that are widely used in various utilities, mining, and construction industry. Mobile ESS can reduce use of diesel generators and provide a cleaner and sustainable alternative for reduction of GHG emissions.
