
New energy storage in the EU

How big is Europe's energy storage capacity?

The latest edition of the European Market Monitor on Energy Storage by LCP Delta and The European Association for Storage of Energy (EASE), released today, highlights Europe's rapid expansion in energy storage capacity, which reached 89 gigawatts (GW) by the end of 2024.

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record-breaking installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.

How many megawatts of energy storage were installed in Europe in 2024?

Historic and forecasted megawatt installs of energy storage across Europe. Image: EASE / LCP Delta. A total of 11.9 GW of energy storage across all scales and technologies was installed in Europe in 2024, bringing cumulative installations to 89 GW.

Which European countries adopted energy storage in 2024?

The rate of energy storage adoption varied across European countries in 2024. Pumped-hydro storage (PHS): Italy, France, Germany, and Spain had the largest capacities. Residential electrochemical storage: Germany and Italy remained the top markets despite a slowdown.

The main energy storage method in the EU is by far "pumped storage hydropower", which works by pumping water into reservoirs when there is an electricity surplus in the grid - ...

The EU has developed a forward-thinking, supportive regulatory framework to encourage energy storage deployment as part of its ambitious clean energy and climate goals.

Energy Storage Europe welcomes EU proposal to end 'first-come-first-served' grid connections Trade association Energy Storage ...

Europe continues to grow its energy storage fleet at pace, advancing its transition to a more sustainable and resilient energy system. According to a new report authored by LCP ...

Europe has seen its first year when energy storage deployments by power capacity exceeded 10 GW in 2023. The eighth ...

The latest edition of the European Market Monitor on Energy Storage by the European Association for Storage of Energy and LCP Delta, released on 31 March, highlights ...

New report: European battery storage grows 15% in 2024, EU energy storage action plan needed Press Release 7 May 2025 MUNICH, Germany (Wednesday 7th May ...

The latest edition of the European Market Monitor on Energy Storage by LCP Delta and The European Association for Storage of Energy (EASE) highlights Europe's rapid ...

A total of 11.9 GW of energy storage across all scales and technologies was installed in Europe in 2024, bringing cumulative installations to 89 GW. According to the ninth annual ...

This study investigates the role of different energy storage technologies in a European electricity sector that complies with the target of net-zero c...

Europe's shift from hourly to 15-minute power pricing has sharply increased arbitrage opportunities for battery storage systems, boosting long-term revenue potential and project ...

The latest edition of the European Market Monitor on Energy Storage by the European Association for Storage of Energy and LCP ...
