What are the solutions for EV charging?

Solutions: 1. We provide turnkey energy storage system to upgrade existing charging station and help lower costs. 2. We can OEM packs and integrate it to your EV charger unit to create a all-in-one charger with built-in battery system.

What is a mobile charging station?

A mobile charging station is a new type of electric vehicle charging equipment, with one or several charging outlets, which can offer EV charging services at EV users' convenient time and location. MCSs are dispatched in response to two kinds of requests, (i) from overloaded FCSs or (ii) from EVs.

How TMCS technology is used in EV charging?

Operating different TMCS technologies such as autonomous robot-like mobile chargers is considered in. In, a Markov chain model is developed to represent the mobile charger operation's stochastic behaviors. These EV chargers could be used at airports or other public parking lots to charge electric vehicles before their owners return.

Can energy storage systems reduce demand charge?

This scenario would double the demand charge. Energy Storage Systems can help stations to balance this load and significantly reduce demand charge which helps cut the costs of a charging station by 70% according to studies. This allows stations to break even much faster. Enables Peak Shaving
