# Payment for Low-Pressure Folding Containers Used in Wastewater Treatment Plants

What is a containerized wastewater treatment plant?

A containerized wastewater treatment plant is a wastewater treatment system that is fully integrated into a container. For uncomplicated and fast transportation, we use 10, 20 and 40-foot shipping containers in accordance with the international ISO standard for our KLARO container systems.

What is a water treatment container?

The container is insulated and equipped with door-in-door, light, and air-conditioning. The container includes the following plants: This customer needed to upgrade the existing water treatment plant, but no free space at site was available. Mobile water treatment in a container was the solution of choice.

What are the advantages of a containerized wastewater treatment system?

Compact and portable: They require minimal space and can be easily transported wherever needed. A standard 20-foot container can hold a system capable of treating wastewater for dozens of people. Rapid deployment: Containerized systems are pre-assembled and ready to use upon arrival, perfect for disaster relief or temporary needs.

What is a containerized wastewater system?

Rapid deployment: Containerized systems are pre-assembled and ready to use upon arrival, perfect for disaster relief or temporary needs. Simply connect the system to the power and water supply, and it's operational. Scalable: Multiple containers can be interconnected to handle larger wastewater volumes when needed.
