
Power station generator automation

Why should you choose ABB for your power plant automation system?

Automation. Evolution. Solution. You need to run secure and reliable solutions for your power plant. We provide a comprehensive range of automation applications to do exactly that. ABB is your reliable partner for world-class, plant-wide automation system solutions.

Can industrial oriented diesel generator be used as auto main failure system?

This paper deals with industrial oriented Diesel Generator used as Auto Main Failure System in NLC Thermal Power Station - II. The system is capable of power supply at the rate of 0.4KV. The 0.4KV emergency buses are being monitored with the help of CT's and PT's through protection relays.

Why do power generation companies need a biomass control system?

As adoption of biomass gains pace, power generation companies must find ways to maintain output while managing multiple feedstocks. Biomass Control Systems provide greater visibility and flexibility to ensure production always meets demand. As the industry changes, coal remains a critical fuel source.

How a diesel generator system works?

The 0.4kv system normal and emergency bus is being monitored all the time by CT's and PT's through protection relays. If the fault occurs in the supply or load, the emergency bus feeding breaker trips and the concerned diesel generator gets started. The whole function of this circuit is controlled by using plc logic is networked modular PLCs.

The GEC6120D Power Station Automation Controller is a high-performance control device developed by Shanghai Fortrust Power Electric Co., Ltd., specifically designed for the ...
