
Price per watt for solar power generation equipment

How much does solar cost per watt?

According to the Solar Energy Industries Association, the average price per watt for residential solar projects was \$3.27 in the first half of 2023. That is up slightly from a low of \$2.92 before the pandemic, but down over 50% from the price of \$6.65 per watt in 2010. Knowing the price per watt of solar is good for two things.

What is price per watt (PPW)?

Price Per Watt (PPW) is a standardized way to compare solar installation costs across different system sizes. By dividing the total system cost by the total wattage, you get a metric that helps evaluate the cost efficiency of different solar proposals. Solar installation costs vary significantly by region due to several factors:

How do you calculate solar cost per watt?

Calculating solar price per watt is pretty simple. Simply divide the cost of the system (in dollars) by the size of the system (in watts). $PPW = \text{System cost} / \text{System wattage}$ Now, solar systems are typically sized in kilowatts (kW), so you'll have to multiply by 1,000 to convert to watts.

How much do solar panels cost?

Solar panels themselves represent only 12-18% of total system cost, typically \$0.30-\$0.50 per watt. Premium monocrystalline panels offer 20-22% efficiency but cost more than standard panels with 18-20% efficiency. Panel type significantly impacts both cost and performance:
