## RV comes with solar air conditioning

Can solar power an RV air conditioner?

For RV owners, installing a solar panel on your RV roof is a great way to reduce your energy costs and increase your ability to live off-the-grid. But can solar power really generate enough wattage to power large appliances like your RV air conditioner? So can you power an RV air conditioner with solar?

How to power RV air conditioning?

The essential components you'll need to consider and properly size as part of a system to power RV air conditioning are solar panels, inverters, and batteries. Installing solar panels on the RV roof or having a movable solar panel suitcase can effectively solve the problem of energy supply.

Do I need a solar panel for my RV?

At minimum, you have the solar panels themselves and a collection of batteries (often known as a 'battery bank') that provides power directly to all of your RV's 12-volt DC electronics. In order to power any 120-volt AC electronics, like your air conditioner, you'll need to install an inverter as well.

Can you run a solar system in an RV?

If running a solar system to power electrical items in your RV is new to you, and you want to try it on a small scale, this 12-volt kit is ideal. The Renogy name has a superb track record in the field, and this kit comes with an oversized 30-amp charge controller. A charge controller is essential with every photovoltaic system that uses batteries.
