
The signal near the solar container communication station is not good

How does solar thermal noise affect a receiver earth station?

For the receive earth station, this once-a-day natural phenomenon of additional solar thermal noise is noticed as a source of interference, which causes signal degradation (interference causing lower link availability) or even daily outages (total signal loss) for small periods of time.

How does sun interference affect satellite-based communication?

Satellite-based communication is affected by sun interference which is caused by the sun passing directly behind a geostationary satellite as seen from a receiving earth station, see Figure 1.

How does a satellite appear in a line-of-sight?

At these times, the apparent path of the sun across the sky takes it directly behind the satellite making it appear in the beam width of a receive earth station's line-of-sight.
